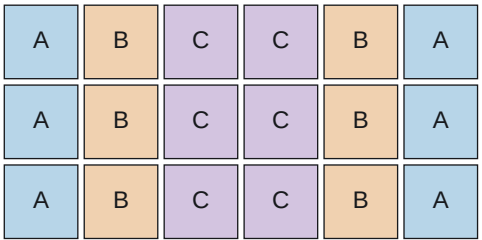
Core mirror M1 / M2 / M5 • identical units, unchanged 6:6:6 count

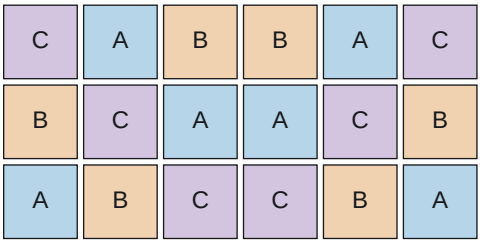
A = M1 B = M2 C = M5 • all devices retain the same orientation

Current • outer columns all M1



Mean x^2 / pitch^2: 6.25, 2.25, 0.25

Proposed permutation • not implemented



Mean x^2 / pitch^2: 2.917 for all three

Both patterns have equal centroids. The proposal also balances all second spatial moments.

Gate-position model only • add surrounding dummies and balanced routing; then reverify electrically
